Profile

Software engineer specializing in building scalable software applications. I focus on creating robust systems that solve real problems, with particular interest in emerging technologies. I enjoy collaborating with teams, whether brainstorming with senior engineers or mentoring junior developers, to ship high-quality software that delivers tangible results. I'm committed to continuous learning and bringing practical, efficient solutions to complex technical challenges.

Work Experience

Senior Fullstack Developer November 2025 – Present | Hybrid

Xchangebox

- **Frontend Development:** Engineered interactive JavaScript UI components—including multi-step wizards, dynamic modals, and server-side DataTables with advanced filtering—for high-volume financial modules.
- **Backend & API Integration:** Built and integrated RESTful APIs using Python and Django REST Framework to drive complex operations like loan booking, KYC updates, and bulk account creation.
- **Performance Optimization:** Optimized database performance by replacing N+1 lookups with batch queries and implementing server-side pagination to eliminate browser memory bottlenecks.
- **Reporting & Document Management:** Built end-to-end financial reporting systems (Excel/PDF) for statements like P&L and Balance Sheets, and implemented secure, size-enforced file upload flows via Cloudinary.
- **UX & Debugging:** Proactively resolved complex frontend state and lifecycle bugs, and improved UX by translating raw third-party API errors into intuitive messages for banking staff.
- **Agile Delivery:** Collaborated in an Agile team to translate business requirements into robust, secure web interfaces for customer onboarding, transaction monitoring, and loan operations.

Frontend Engineer March 2026 – Present

Muveta

- **Frontend Architecture & State:** Engineered end-to-end Project Workspaces and Event Management modules using React, TypeScript, TanStack Router, and Zustand for complex active-context state management.
- **Payments & Data Dashboards:** Integrated Stripe Express for payment onboarding and built live ticket sales dashboards featuring server-side filtering, custom CSV exports, and dynamic data processing.
- **Authentication & Caching:** Built robust session management using Axios interceptors for seamless token refreshes and optimized TanStack Query caching to eliminate stale data and cache corruption.
- **Access Control & Subscriptions:** Architected role-based access control (RBAC) for project collaborators and developed comprehensive profile subscription and mail broadcast UIs with centralized API error parsing.

- **UI/UX & Discoverability:** Delivered mobile-first, responsive interfaces—resolving complex z-index and redirect loop issues—and implemented dynamic SEO Open Graph metadata via Vite to improve public page discoverability.
- **Engineering Excellence:** Maintained CI/CD reliability by resolving critical strict-mode TypeScript build errors and shipped 50+ user stories within an Agile framework.

Software Engineer || Instructor May 2025 – May 2026 | Hybrid
NIHUB

- Developed and deployed full-stack web applications using Rust for secure, high-performance backends, integrated with React, Next.js, and Express frontends within a Dockerized Linux environment, ensuring seamless scalability and memory safety.
- Architected and built an internal event management system to streamline company operations, leveraging Rust's ownership model and async runtime (Tokio) for fault-tolerant, concurrent processing of event data—taking full ownership from ideation through production deployment.
- Implemented Rust-based microservices for core backend logic, including real-time notification handling and API gateways, resulting in optimized resource utilization and zero runtime panics under load.
- Mentored and instructed students in modern web development as part of their Industrial Training, learning about front-end technologies to build robust, production-ready applications.
- Managed the full software lifecycle, including Rust crate selection and optimization, containerization with Docker, and deployment on company-hosted Linux VMs, while fostering best practices in code reviews and CI/CD pipelines tailored to Rust workflows.

Fullstack Developer January 2025 – September 2025
A&D Technology Consulting

- Built entire frontends from the ground up for client-facing web applications using React and Next.js, delivering responsive, intuitive interfaces that enhanced user engagement for multiple portfolio companies in e-commerce and SaaS sectors.
- Collaborated closely with management and cross-functional client teams to align site functionality with evolving business requirements, iterating on features through agile sprints to support scalable growth for diverse industry clients.
- Managed end-to-end technical implementations, including domain procurement, cloud hosting setup , and integration of backend services—enabling seamless launches of custom web apps and prototypes for consulting clients in fintech and education.
- Engineered bespoke software solutions for external partners, such as mobile-responsive dashboards and API-driven tools, leveraging TypeScript for robust codebases that reduced deployment times by 35% and empowered clients to onboard users rapidly.
- Led consulting engagements to develop tailored applications, from MVP prototypes to production-ready systems, fostering long-term client relationships by translating complex requirements into high-impact, maintainable software that drove operational efficiency across startups and enterprises.

ICP Blockchain Ambassador, Internet Computer Protocol (DFINITY Foundation) July 2024 – February 2026
Remote (Sahara Region Focus)
DFINITY FOUNDATION

- Organized and led 15+ community events, including technical workshops and hackathons, attracting over 500 participants and fostering grassroots adoption of ICP's Rust-based smart contract ecosystem in emerging markets.
- Delivered keynote presentations and hands-on onboarding sessions on ICP development, empowering novice and intermediate developers to deploy secure, scalable dApps using Rust, Motoko, and WebAssembly—resulting in a 40% increase in regional developer registrations.

- Collaborated with global ICP ambassadors and DFINITY teams to curate educational content, including tutorials on zero-knowledge proofs and canister models, distributed via YouTube and GitHub to accelerate user onboarding and reduce entry barriers for blockchain innovation.
- Drove user acquisition initiatives by integrating ICP tools into local tech meetups and university partnerships, onboarding 200+ new developers to the ecosystem and contributing to a 25% growth in active Sahara-based ICP projects.
- Mentored emerging Web3 builders through one-on-one code reviews and project sprints, emphasizing Rust's safety features for decentralized applications, while gathering feedback to refine ICP's community resources and documentation.

Fullstack developer November 2024 – January 2025
Fluxnudge - Icp Hub Sahara
- Architected and implemented robust backend systems using Node.js with Bun runtime and TypeScript, resulting in 40% improvement in API response times
- Designed and optimized MongoDB database schemas and queries that can scale to support alot of daily active users
- Implemented comprehensive authentication and authorization systems using JWT, enhancing platform security
- Developed RESTful APIs that seamlessly integrated with frontend React components, improving development workflow efficiency by 30%
- Leveraged TypeScript's strong typing to reduce production bugs by 60% compared to previous JavaScript implementation
- Optimized Bun runtime configuration to achieve 25% faster server startup and request handling compared to standard Node.js

Front-end Developer -Internship
Zummit Africa
- Assisted in the development of user-facing features, translating design mockups and wireframes into high-quality code.
- Gained hands-on experience with front-end technologies like HTML5 and React.js.
- Contributed to improving website responsiveness and user experience across various devices.
- Collaborated with the development team to troubleshoot and resolve front-end issues.

Projects

Guitar Tuner CLI
Rust, DSP, Audio Processing

- Developed a **cross-platform command-line guitar tuner** using Rust, implementing real-time audio processing and frequency detection algorithms
- Engineered **Fast Fourier Transform (FFT) analysis** with parabolic interpolation for precise fundamental frequency detection (±50 cents accuracy)
- Implemented **real-time DSP techniques** including Hann windowing, DC offset removal, harmonic detection, and exponential moving average (EMA) filtering
- Designed **interactive CLI interface** with color-coded visual feedback system using terminal manipulation for enhanced user experience
- Utilized low-level audio APIs (cpal) for cross-platform audio input handling with configurable sample rates and buffer management
- Applied signal processing optimizations including threshold-based peak detection and multi-candidate harmonic analysis for improved accuracy on low-frequency strings

Mothtype

Programming typing test || Tech Stack: Next.js, JavaScript, Convex, Vercel, gemini

- Developed a full-stack web application using Next.js framework with modern React practices
- Implemented real-time backend functionality using Convex for database operations and API management
- Integrated server-side rendering and optimized font loading with Next.js built-in features
- Deployed and maintained production environment on Vercel with continuous integration
- Built responsive user interface with modern JavaScript and React components

Education

Civil Engineering 2019 – 2025 | Minna, Nigeria

Federal University Of technology, Minna

Skills

JavaScript
Advanced: Frontend, API Integration

Rust
Advanced: Backend, Blockchain, Systems Programming, Async with Tokio, DSP/Audio Processing

Express.js
Intermediate: RESTful APIs, Middleware

AWS
Intermediate: Hosting, EC2, S3 for Deployments

TypeScript
Advanced: Full-Stack, Node.js with Bun Runtime

Solidity
Intermediate: Smart Contracts, Ethereum/ICP-Compatible

MongoDB
Advanced: Schema Design, Query Optimization, Scaling for High DAU

CI/CD Pipelines
Intermediate: GitHub Actions, Automated Testing

React.js
Advanced: Component-Based UI, Hooks, State Management

Tailwind CSS
Advanced: Utility-First Styling, Responsive Design

PostgreSQL
Intermediate: Relational Queries, Integration with Rust Backends

Python
Advanced: Intermediate: Scripting, Data Processing, Automation

Next.js
Advanced: Server-Side Rendering, Static Sites, API Routes

Zig
Intermediate: Low-Level Systems, Performance Optimization

Docker
Advanced: Containerization, Multi-Stage Builds, Linux Environments

Golang
Competent: Backend Development, REST APIs, Microservices, Concurrency (Goroutines)
